

are classified in three broad groups; addition polymers, condensation polymers and special polymers. It is well known that the major consumption of additives is in PVC compounds. Tue, 10 Apr 2018 21:00:00 GMT Polymer Additives¹/₂æChemical Products¹/₂æADEKA - Today, natural and synthetic polymers both rely on additives for processing. To create new blends, polymer additives and polymer resins are mixed to produce improved materials. Standard mixtures are produced that can be further customized by adding various additives to create a variety of chosen materials and meet individual processing needs (Ram, 1997). Tue, 13 Mar 2018 23:57:00 GMT Analysis of Polymer Additives in the Packaging Industry - two families of polymer additives. In micropowder form, Dyneon[®], Polymer Additives dramatically improve mar resistance. In granular form, Dyneon Polymer Additives offer enhanced anti-drip properties. These polymer additives improve performance in critical applications for industries including automotive, wire and cable and building materials.
